

# Theta

## LED Natatorium Lighting

### Lower the cost of your indoor pool lighting with Theta

Reduce the energy consumption and maintenance costs in your natatorium with the EYELITE® Theta High Bay from EYE Lighting. This LED luminaire operates at less than half the wattage of a traditional HID solution with virtually no maintenance over its lifespan.

Theta's IP66 rated design with a durable powder coat finish and stainless steel hardware was designed to withstand the high humidity and chlorinated air present in a natatorium environment. The solid one-piece aluminum casting with flow-through heat sink design maximizes the life of the LEDs to ensure many years of maintenance-free reliable service.

This versatile luminaire can be mounted in any orientation to provide the best possible experience for your guests. Aim it toward the ceiling for glare-free ambient lighting or aim it down for direct lighting. The optional wall bracket accessory allows for mounting along the walls or use the included hook to hang it from the ceiling. The wide beam optics will provide excellent uniformity and high vertical footcandles in any orientation. The 4000K or 5000K color temperature with 80 CRI will provide a clean white light with excellent color rendering to improve the overall look and feel of your indoor swimming environment.

- 1 Can be rotated to any position for direct or ambient lighting
- 2 IP66 Rated to guard against humidity and water intrusion
- 3 Three phase powder coat finish approved for natatorium use
- 4 Wide distribution provides excellent uniformity
